

Used Parts for Forklifts

Used Forklift Parts - In due course, lift truck parts would wear and need to be replaced. Acquiring new components can become a costly venture so another idea is to buy used forklift components. This can save much money in the end. It is a good idea to acquire used forklift components which have been reproduced. These components will guarantee that you are getting components which would work for a long time and be productive.

Remanufacturing worn out or broken components is a more cost effective way overall than rebuilding. With rebuilding components, just the components which are broken or worn out get replaced, which means that other wearable components may break down soon after purchase.

Remanufacturing however offers the best guarantee for second-hand components. Reproduced parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable components are replaced regardless of age or wear which is one more reason why remanufactured parts on the whole work so much better. Whatever part within the part is new and this offers far longer life to the second-hand part. Based on the lift truck parts that are being redone, the cleaning process and the whole remanufacturing process will vary.

The engines are cleaned after a complete disassembly. Several engine parts such as pistons, spark plugs, rings, valve springs, filters, and valves can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are disassembled, oven cleaned and pressure washed. A thorough inspection is performed to check for any cracks. Bushings, seals and bearings are all replaced. Usually, the replacement components utilized on transmission components meet OEM specifications.

Certain parts such as torque converters, the alternator, the water pump, the starter and steer axles can acquire longer serviceability after being remanufactured and having all wearable components replaced. The electronic control in the electric forklift is maintained by the control card. This particular card could likewise be remanufactured with replacing all aged and worn out components. Not like several lift truck parts the control card can only have the worn and aged components replaced.

Parts that are remanufactured have to be comprehensively inspected upon reassembly to guarantee they are in good condition prior to being sold. When buying these parts, it is a good idea to be certain that they have undergone all of the proper testing and inspections. On certain larger components like engines, transmissions and steer axles, OEM specification replacement components must be used.

The dealer of used lift trucks and components can guarantee that the remanufactured components have met OEM specifications and that these parts meet industry standards. Lots of details go into remanufacturing second-hand components. This attention to detail offers more serviceability out of remanufactured parts opposed to the parts that were simply rebuilt.
