This system enables Doosan Infracore America to aggressively compete in this competitive marketplace. The lift truck product line remarkably comprises of 63 distinctive models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these numerous truck models vary from 3,000 to 33,000 lbs. All vehicles are designed in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest emerging forklift and lift truck corporation in the North American marketplace, thanks to its outstanding level of product performance and their persistently high level of customer support and service given to all Doosan Infracore Lift Truck clients. The U.S. forklift division based in Cleveland has a professional team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

Initially the home-based forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled lift trucks as part of a home-based machinery expansion project. Sales of these products were primarily targeted to state-run corporations, large scale businesses, and the armed forces. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical instruction grew to become the new focus for improving quality and product development.

Daewoo started the first domestic lift truck business in 1967, and quickly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of substantial expansion of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative enterprise project to respond to competitive pressures in the US materials handling industry. This endeavor radically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a new plant which helped launch the business for the fabrication of high added-value goods suited for export. In 1993, the company had a global sales network and started exporting designs they had developed through in-house expertise, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into international markets.
